CLINICAL INTERPRETATIONS & NOTES

KIDNEY FUNCTION TEST ADVANCE (KFT)

Assessment of renal function is vital in identifying the presence of renal disease, monitoring therapeutic responses, and determining the progression of chronic kidney disease (CKD). Urea is synthesized in the liver as the final product of protein and amino acid metabolism, depending heavily on daily dietary protein intake and endogenous protein catabolism. Creatinine is a metabolic product of creatine/phosphocreatine found almost exclusively in skeletal muscle, making its clearance rate a primary marker of glomerular filtration.

SUGGESTED ADVISORY & DO'S/DONT'S
